

Retail Demand Forecasting

Case ID: UC-1 **Time:** as shown on the portal **Submission:** one link

Background

FreshMart runs 50 grocery stores. Store managers order stock by gut feeling, which leads to 12% of perishable items being thrown away and frequent stock-outs of fast-moving items on weekends.

Your Task

1. Design a weekly demand forecast for the top 20 products of each store.
2. Explain which data you would use (sales history, holidays, weather, promotions) and why.
3. Propose how store managers would see and use the forecast every Monday.
4. Describe how you would measure whether the forecast is reducing waste.

What to Submit

- A short document or slide deck (maximum 8 pages) explaining your approach.
- Optional: a spreadsheet, notebook or prototype showing a sample forecast.

Evaluation Criteria

- Understanding of the problem (25%)
- Quality and feasibility of the solution (35%)
- Use of data and measurable impact (25%)
- Clarity of presentation (15%)

Upload your work to Google Drive, GitHub or any website, make sure the link opens without signing in, and paste the link in the portal before the time ends.
