

Customer Support Assistant for a Bank

Case ID: UC-2 **Time:** as shown on the portal **Submission:** one link

Background

CityBank receives 8,000 customer queries a day over chat and e-mail. 60% are routine (card blocking, balance, statement requests, KYC status), yet average response time is 9 hours.

Your Task

1. Design an assistant that answers routine queries and hands complex ones to a human agent.
2. List the top 10 query types you would automate first and justify the order.
3. Explain how the assistant keeps customer data safe and avoids wrong answers.
4. Define the metrics you would report to the bank after the first month.

What to Submit

- A document or slide deck (maximum 8 pages) with the design and a sample conversation flow.
- Optional: a clickable mock-up or working prototype.

Evaluation Criteria

- Understanding of the problem (25%)
- Quality and feasibility of the solution (35%)
- Use of data and measurable impact (25%)
- Clarity of presentation (15%)

Upload your work to Google Drive, GitHub or any website, make sure the link opens without signing in, and paste the link in the portal before the time ends.
