

Hospital Appointment Scheduling

Case ID: UC-3 **Time:** as shown on the portal **Submission:** one link

Background

A 300-bed hospital books outpatient appointments by phone. Patients wait 2–3 hours on the day of the visit, 18% of patients do not turn up, and doctors' time is unevenly used.

Your Task

1. Redesign the appointment booking and reminder process for patients and staff.
2. Propose a way to reduce no-shows and waiting time, with expected impact.
3. Describe the screens or messages a patient would see from booking to visit.
4. Identify the risks (e.g. elderly patients without smartphones) and how you handle them.

What to Submit

- A document or slide deck (maximum 8 pages) with the process, screens and impact estimate.
- Optional: a wireframe or prototype link (Figma, website, etc.).

Evaluation Criteria

- Understanding of the problem (25%)
- Quality and feasibility of the solution (35%)
- Use of data and measurable impact (25%)
- Clarity of presentation (15%)

Upload your work to Google Drive, GitHub or any website, make sure the link opens without signing in, and paste the link in the portal before the time ends.
